

PikaCart - Landing Pages Spec

Website Services + WordPress Themes: two homepage buttons and two landing pages

Version 1.0 · September 2026 · builds on theme v2.0 — nothing else on the site changes

0. Goal in one line

Right under the homepage banner carousel, add two big visual cards. Website Services (wallpaper + “See details & price”) opens a landing page that shows every website type with photos that change by themselves, price, reviews and an Order now button that opens WhatsApp. WordPress Themes (theme screenshots that keep changing + “Buy now”) opens a landing page that lists every theme with wallpaper, title, description, tags, price and coupon, and a Buy now button that pays through the existing Razorpay checkout and delivers the download instantly.

Decision	Chosen	Why
Where the buttons live	New homepage block “Showcase cards”, directly below the hero carousel	Most-seen spot after the banners; no other homepage change
Landing page URLs	/website-services/ and /wordpress-themes/	Short, keyword-rich, easy to share on WhatsApp
Where website types come from	Existing “Service” products (no duplicate data entry)	Owner already fills price, packages, FAQ, images per service
Where themes come from	Digital products in the chosen “WordPress Templates” category	Reuses Razorpay checkout, license/download delivery, reviews
Changing images	Featured image + gallery (up to 5) cross-fade every 3.5 s	No new upload screen to learn; pauses on hover, respects reduce-motion
Services payment	None on site — WhatsApp after discussion	Matches business model; avoids GST/online-payment rules for custom work
Theme payment	Existing Razorpay checkout → instant download	Already built and tested (230 automated tests)

1 Homepage: the two showcase cards

Element	Website Services card	WordPress Themes card
Size	Half width on desktop (two side by side), full width stacked on phones; 16:9 on desktop, 4:3 on phones, 20px rounded corners	Same
Background	Wallpaper image chosen in admin; if empty, the service images cross-fade automatically	Theme screenshots from the theme products cross-fade automatically (up to 6)
Overlay	Dark indigo gradient from bottom-left so white text always reads	Same, with a subtle device-frame style shadow
Text	Kicker "WEBSITE SERVICES" · headline "Professional websites for schools, committees & shops" · "Starting ₹3,000" (lowest service price, automatic)	Kicker "WORDPRESS THEMES" · headline "Ready-made WordPress themes" · "From ₹999 · Instant download" (lowest theme price, automatic)
Button	"See details & price →" (white) → /website-services/	"Buy now →" (orange) → /wordpress-themes/
Whole card clickable	Yes (same link), tracked as a click	Yes
Admin control	On/off + order in Storefront & SEO → Homepage blocks; texts and wallpaper editable	Same

2 Landing page 1 — /website-services/

Everything on this page is about websites only (no notes/templates). It is built from the service products, so adding a new service in admin adds a new website type here automatically.

- 1 Hero — full-width wallpaper that cross-fades through service images; H1 "Website Development for Schools, Committees & Shops" (editable); subtitle; three trust chips: "Ready in 5-10 days", "Pay after we agree", "Full refund if we can't deliver"; buttons "Chat on WhatsApp" and "See website types ↓".
- 2 Coupon strip (only when a code is set) — e.g. "Use code FIRSTSITE — ₹500 off your website" with a Copy button. The code is added to every WhatsApp order message automatically.
- 3 Website types — one large block per service, alternating image left/right on desktop, stacked on phones:
 - Image slideshow: featured image + gallery, cross-fade every 3.5 s, dots, swipe; first image loads first for speed.
 - Badge (e.g. "Most popular"), H2 title, short description, rating chip with review count.
 - "What's included" (first 6 items) and turnaround time.
 - Price: "Starting ₹5,000" plus package pills (Basic ₹5,000 · Standard ₹8,000 · Premium ₹12,000) when packages exist.
 - Buttons: Order now (WhatsApp, message names the website type and the coupon) and "Full details" (opens the service page with packages, FAQ and enquiry form).

- 1 How it works — the 4 steps already set in Storefront & SEO.
- 2 Reviews & feedback — average rating across all website services, latest verified client reviews (name, stars, words, date) and testimonials.
- 3 Our work — up to 6 portfolio items with “View live site”.
- 4 FAQ — the default service FAQ (accordion).
- 5 Contact details — WhatsApp, phone, email, area served, working hours + the existing enquiry form (saves to Leads).
- 6 Final call-to-action band — “Have a website idea? Let’s talk” + WhatsApp.

3 Landing page 2 — /wordpress-themes/

- 1 Hero — theme screenshots cross-fade behind the text; H1 “Ready-made WordPress Themes” (editable); chips “Instant download”, “Secure Razorpay payment”, “Setup guide included”.
- 2 Coupon strip — shows the best public coupon that applies to themes (from Marketplace → Coupons with Copy).
- 3 Tag filter chips — All · School · Committee · Café ... (from the themes’ tags), filters instantly without reloading.
- 4 Theme cards (3 per row desktop, 1 per row phone) — wallpaper slideshow from the theme’s images · title · 2-line description · tags · price with struck-through MRP and % off · “Best offer: ₹X with CODE” · buttons Buy now (straight to Razorpay checkout) and Live preview (only if a demo URL is set). Clicking the image or title opens the full theme page.
- 5 What you get with every theme — editable checklist (theme ZIP, demo content, setup guide PDF, free updates, WhatsApp support).
- 6 Reviews — average rating and latest verified buyer reviews across themes.
- 7 FAQ — themes FAQ (editable): installing, hosting, licence, refunds, customisation service.
- 8 Need it installed? band — links to the Website Services landing page (cross-sell).

Purchase & delivery (existing system, verified)

Buy now → login/register if needed → Razorpay Checkout (UPI, cards, netbanking) → order confirmed page with Download button → email receipt → always available in My Account → My Purchases with fresh expiring links. Coupons apply at checkout. Refunds from the admin order screen revoke access.

Single theme page

The existing product page, plus: auto-changing gallery, Live preview button next to Buy now, and all reviews/FAQ/offers already built.

4 Admin, SEO, speed and acceptance tests

Setting (Storefront & SEO → Landing pages)	Default
Services card: wallpaper image, headline, button text	Auto images · “Professional websites for schools, committees & shops” · “See details & price”
Themes card: headline, button text	“Ready-made WordPress themes” · “Buy now”
Services page: H1, subtitle, SEO title, SEO description	Filled with keyword-rich defaults
Services coupon code + text	Empty (strip hidden)
Contact: working hours	Mon–Sat, 10am–7pm IST (phone/email/WhatsApp reuse existing settings)
Themes page: category, H1, subtitle, SEO title, SEO description, “What you get” list, FAQ	Auto-detect category containing “WordPress”/“theme”
Per theme product: Live demo URL (new field)	Empty

- SEO: unique title/description, canonical, Open Graph image, breadcrumbs; JSON-LD ItemList of Service nodes + FAQPage (services) and ItemList of Product nodes with offers (themes); both pages added to the XML sitemap; one H1 each; all images with alt text.
- Speed: slideshows use CSS cross-fade with lazy-loaded extra images; only the first image is high priority; no new libraries.
- Tracking: Order-now/WhatsApp clicks logged per service (Clicks report); card clicks counted.

Acceptance test	Pass condition
Homepage	Two cards visible under the carousel on desktop and phone; buttons open the right pages
Services landing	Every published service appears with slideshow, price, packages, Order now (wa.me link with type + coupon), reviews, contact, FAQ
Themes landing	Only theme-category products; Buy now adds to cart and goes to checkout; Live preview only when set; coupon hint shown
Payment	Demo/Razorpay payment → order-received shows Download; purchase listed in My Purchases
SEO	200 status, indexable, canonical, schema valid, in sitemap; Lighthouse SEO 100
Regression	All existing automated tests still pass
