

ROLE FOR CLAUDE CODE: You are a senior Flutter engineer and product designer. Build **FinChowk**, a fast, colourful, lightweight Android app that helps Indian users discover financial offers from authorised referral/affiliate partners and opens the partner's official website/app when they tap **Apply Now**. The owner earns referral commission. Implement the UI **pixel-accurately from the owner's Figma file** (Section 2) and use this document as the source of truth for behaviour, data, security and compliance. Work phase by phase (Page 6) and stop for review after each phase.

1.1 Non-negotiable product rules

- This is **NOT a lending app**. It never provides, approves, rejects or processes loans, KYC, PAN, Aadhaar or any financial decision.
- It only displays partner-supplied offer information and opens the partner's authorised tracking/affiliate URL.
- **Never invent** interest rates, loan amounts, approval time, eligibility, fees, income requirements or commission. If a field is empty in the config, **hide it** — never show a placeholder value.
- Banned wording anywhere (UI, store listing, notifications): “100% approval”, “guaranteed loan”, “instant approval guaranteed”, “no documents guaranteed”, “lowest rate”, “guaranteed ₹5 lakh”.
- No affiliate URL is ever hard-coded inside a screen. Every URL comes from the central offer config (remote first, bundled fallback second).
- Offer/partner/link changes must go live **without a new APK**.
- Collect no sensitive data: no contacts, SMS, call logs, photos, files, location, PAN, Aadhaar, bank details, OTP, UPI PIN or passwords.

1.2 Fixed decisions

Area	Decision
App	Flutter (stable 3.x, Dart 3), Material 3, Android min SDK 24, target latest required by Play
Backend	Firebase: Firestore (offers, partners, categories, app config, stats), Cloud Functions (click aggregation), Firebase Auth (admin only), App Check, Hosting (admin panel + legal pages)
Admin	Web admin panel (React + Vite + TypeScript) hosted on Firebase Hosting, admin-only login
Languages	English + Hindi (Hindi) with in-app toggle; all strings in ARB files, none hard-coded
Theme	Light + Dark, follows system by default, manual override in Settings
Design source	Owner's Figma file → tokens + components below. Figma link: [PASTE_FIGMA_FILE_LINK]

1.3 Design system — “Trust + Energy” palette

Map these to Figma Variables (collections: Color/Light, Color/Dark) and to a Flutter AppColors ThemeExtension. If the Figma file defines different values, **Figma wins**; otherwise use these.

Token	Light	Dark	Use
primary	#4F46E5	#818CF8	Buttons, links, active tab, header
secondary	#F97316	#FB923C	Apply Now button, highlights, badges
accent	#10B981	#34D399	Success, “verified partner” chip
background	#F8FAFC	#0B1020	Screen background
surface	#FFFFFF	#151B2E	Cards, sheets
textPrimary	#0F172A	#F1F5F9	Headings, body
textSecondary	#475569	#94A3B8	Captions, descriptions
border	#E2E8F0	#26304A	Card outlines, dividers
warningBg	#FFF7ED	#2A1A0B	Disclaimer boxes

Category colours (soft gradient on card background, solid on icon circle; dark mode uses 18% opacity tint):

Category	Start → End	Icon	Category	Start → End	Icon
Personal Loan	#6366F1 → #8B5CF6	wallet	Demat / Investment	#8B5CF6 → #D946EF	trending_up
Business Loan	#0EA5E9 → #2563EB	storefront	Home Loan	#F59E0B → #F97316	home
Credit Cards	#EC4899 → #F43F5E	credit_card	Insurance	#10B981 → #059669	shield
Bank Account	#14B8A6 → #0D9488	account_balance	Other Offers	#64748B → #334155	grid_view

Typography: Poppins (headings, 600/700) + Inter (body, 400/500), bundled as subset fonts (Latin + Devanagari fallback: Noto Sans Devanagari). Scale: Display 28/34 · H1 22/28 · H2 18/24 · Title 16/22 · Body 15/22 · Caption 13/18 · Button 15/20 semibold. Minimum body size 14sp. **Spacing:** 4-pt grid (4, 8, 12, 16, 20, 24, 32). Screen padding 16. **Radius:** card 20, button 14, chip 999, sheet 28. **Elevation:** cards use 1px border + very soft shadow (y2 blur8 8% black); no heavy shadows. **Icons:** Material Symbols Rounded, 24px. **Motion:** only 150–200ms fades/scale on tap; no decorative or looping animations. Respect system “remove animations”.

2.1 Figma → code workflow (do this first)

- If the Figma MCP server is connected in Claude Code, use it to read the file at **[PASTE_FIGMA_FILE_LINK]**: pull variables (colours, spacing, radius, type), component definitions and each screen frame. If it is not connected, ask the owner to connect it or to export frames as PNG + a tokens JSON (Tokens Studio) into /design.
- Generate lib/core/theme/tokens.dart from the Figma variables — never eyeball hex values from screenshots when variables exist.
- Build every Figma component as a reusable Flutter widget in lib/core/widgets/ before building screens. Match names 1:1 (Figma “OfferCard” → OfferCard).
- Frame baseline: 360×800 dp. Must also look correct at 320dp width and 600dp+ (tablet: 2-column grid). Text must survive 130% system font scale without clipping.
- Where Figma and this document conflict on **visuals**, follow Figma. Where they conflict on **behaviour, data, legal text or compliance**, follow this document and list the conflict in DESIGN_NOTES.md.
- Export partner logos as WebP/SVG ≤ 20 KB each. No raster images larger than needed; no Lottie; no video.

2.2 Required Figma components (and Flutter widgets)

Component	Variants / states	Notes
AppHeader	default, search-active	Logo, app name, search icon, menu icon
CategoryCard	8 categories × light/dark, pressed	Gradient bg, icon circle, title, CTA text
OfferCard	with/without eligibility, loading skeleton	Logo, partner, product, 2-line description, optional eligibility chips, Apply Now
PrimaryButton / SecondaryButton	default, pressed, disabled, loading	Apply Now = secondary (saffron) filled; min height 48
InfoChip	neutral, verified, category	Only for partner-supplied facts
DisclaimerBox	compact, full	warningBg, info icon, always visible near Apply
StateView	loading, empty, error, offline	Illustration icon + message + retry
BottomSheet	leave-app confirm	Shown before opening partner link
SettingsTile, LegalPage	switch, chevron, radio	Used by Settings and 7 legal/info screens

2.3 Home screen

- **Header:** logo + “FinChowk” + tagline “Loan, Card & Insurance Offers”, search icon (opens search over active offers by partner/title/category — local search, no network call), menu icon (opens drawer: About, Partners, Disclosure, Disclaimer, Privacy, Terms, Contact, Settings).
- **Hero card** (primary gradient #4F46E5 → #7C3AED, white text): “Find Financial Offers in One Place” · subtitle “Explore loan, credit card, banking, insurance and investment offers from participating partners.” No numbers, no promises.
- **Category grid** — 2 columns, 8 CategoryCards in this order, driven by the categories config (order, label, CTA, active flag are remote): Personal Loan “Check Offers” · Business Loan “Check Offers” · Credit Cards “View Cards” · Bank Account “Open Account” · Demat / Investment “Open Account” · Home Loan “Check Offers” · Insurance “View Offers” · Other Financial Offers “Explore”.
- A category with zero active offers is hidden automatically (unless config says showWhenEmpty).
- Optional **“Featured”** horizontal row: offers where featured == true, max 5. Hidden if none.
- **Footer strip:** one-line disclosure “We are not a lender. Some links are affiliate links.” + “Learn more” → Affiliate Disclosure screen.
- First paint from local cache in < 300 ms after splash; refresh silently in background; show a small “Updated” snackbar only if content changed.

2.4 Category screen

- App bar with category name + back. Coloured header band using the category gradient, short description from config.
- **Sub-category tabs** (Paisabazaar-style) when the category defines subcategories: Insurance → Term Life · Health · Motor (Car/Bike) · Travel · Others; Demat / Investment → Stocks & Demat · Mutual Funds · Fixed Deposits; Credit Cards → Lifetime Free · Cashback · Travel · Fuel (only as labelled by the partner). Tabs with zero active offers are hidden. Credit-score offers go under “Other Financial Offers” and open the partner's own page — we never collect PAN or pull a score ourselves.
- Filter chips by partner only if the category has ≥ 2 partners. No rate/amount sort (we don't hold verified numbers).
- List of OfferCards sorted by displayOrder. Pull-to-refresh. Skeleton cards while first load; StateView for empty/offline/error.
- Pinned compact DisclaimerBox at the bottom of the list: “We are not a bank/NBFC/lender. Terms are set by the partner.”

3.1 Offer card & Offer details

- **OfferCard:** partner logo · partner name · product title (e.g. “Personal Loan”) · 2-line description · up to 3 InfoChips from highlights[] (only if provided by partner) · “Details” text button · **Apply Now** button. Subline: “Apply through official partner”.
- **Offer Details screen:** large logo + partner name + “Verified partner” chip only if partner.verified == true; product title; full description; sections rendered **only if data exists**: Key features, Eligibility (as officially provided), Documents (as officially provided), Fees & charges link (opens partner's official page). Then offer-specific disclaimer, then the full DisclaimerBox, then sticky bottom bar: “Check Eligibility” (only if eligibilityUrl exists) + “Apply Now”.
- Absolutely no computed or estimated values (no EMI calculator with made-up rates, no “you may get ₹X”).

3.2 Apply Now flow

```
User taps Apply Now
→ validate URL (https + host in partner.allowedDomains) — fail → show error, log 'invalid_url', do NOT open
→ show BottomSheet: "You are leaving FinChowk and going to <Partner>'s official site.
    The partner decides eligibility, rates and approval." [Continue] [Cancel]
    (sheet can be disabled per-offer via confirmBeforeLeave=false)
→ if analytics consent == true: write anonymous click {offerId, partnerId, category, ts, appVersion}
→ open trackingUrl ?? applyUrl with url_launcher LaunchMode.externalApplication
    (Android App Links will open the partner's app if installed; otherwise the default browser)
→ never open partner pages in an in-app WebView; never inject JS; never read the partner page
```

Click logging must never block navigation: fire-and-forget with 2 s timeout; queue offline and flush later (max 50 queued).

3.3 Trust, legal & settings screens (all text editable remotely)

Each legal screen renders sanitised Markdown from appConfig.legal.<key> (EN + HI), with bundled fallback text and a “Last updated” date. The same content is also published as public web pages on Firebase Hosting (Play Store needs a public privacy-policy URL).

Screen	Content / behaviour
About Us	Who we are, that we are a referral platform, owner name/business name, contact email
Affiliate Disclosure	“Some links displayed in this application may be referral/affiliate links. We may receive a commission when an eligible user completes a qualifying action through such links. This does not increase the price paid by the user.”
Disclaimer	“We are not a bank, NBFC, insurer, broker or lender. We do not approve or reject applications. Financial products are provided by third-party partners. Eligibility, interest rates, fees and approval are determined by the respective provider. Please verify all terms before applying.”
Partner Information	Auto-generated list of active partners: logo, name, categories, official website, and regulator/registration text only if supplied by the partner
Privacy Policy	What is collected (anonymous clicks, crash logs if consented), what is not, retention, contact, grievance officer
Terms & Conditions	Use of app, no advice, third-party responsibility, governing law (India)
Contact Us	Email + optional WhatsApp/website from config; opens mail app — no in-app form storing personal data
Delete / Privacy Request	Explain no account exists; button “Reset my data” clears local cache, consent and queued events; link to email request for anything else
Settings	Theme (System/Light/Dark) · Language (English / Hindi) · Analytics consent toggle · Clear cache · App version · Links to all legal screens

3.4 States & first launch

- **First launch:** one-screen welcome (3 bullets: “Compare partner offers”, “Apply on official sites”, “We never ask for OTP, PIN or passwords”) + analytics consent choice (default **off** until user agrees) + Continue. No sign-up, no login.
- **Offline:** show cached offers with an “Offline — showing saved offers” banner; Apply Now still works (browser handles network).
- **No cache + offline:** use bundled fallback JSON; if that is also empty, StateView with Retry.
- **Error:** friendly message, never raw exception text. Crash reporting (Firebase Crashlytics) only with consent.

4.1 Project structure (feature-first, clean architecture)

```
finchowk/
  app/
    lib/
      main.dart app.dart router.dart          # go_router
      core/ theme/ (tokens.dart, app_theme.dart) widgets/ l10n/ utils/ (url_guard.dart, sanitize.dart)
      data/ models/ (offer.dart, partner.dart, category.dart, app_config.dart) # freezed + json_serializable
            sources/ (remote_firestore_source.dart, cache_source.dart, fallback_asset_source.dart)
            repositories/ (offer_repository.dart, config_repository.dart, click_repository.dart)
      features/ home/ category/ offer_details/ search/ legal/ settings/ onboarding/
      assets/ config/offers_fallback.json fonts/ logos/
      test/ integration_test/
    admin/
      functions/
      firestore.rules firestore.indexes.json firebase.json
    DESIGN_NOTES.md README.md
```

Packages (keep it lean): flutter_riverpod, go_router, freezed/json_serializable, cloud_firestore, firebase_core, firebase_app_check, firebase_crashlytics (consent-gated), url_launcher, hive (cache), cached_network_image, flutter_markdown (with custom safe builders), intl. Do not add packages without justifying size/benefit in the PR notes.

4.2 Data model (Firestore collections)

Collection	Key fields
partners/{id}	name, logoUrl, website, allowedDomains[], categories[], verified(bool), regulatoryInfo?, active, displayOrder, updatedAt
offers/{id}	partnerId, category, subcategory?, title{en,hi}, description{en,hi}, highlights[{en,hi}]?, eligibility[{en,hi}]?, documents[{en,hi}]?, applyUrl, trackingUrl?, eligibilityUrl?, feesUrl?, disclaimer{en,hi}?, active, featured, displayOrder, confirmBeforeLeave(bool, default true), validFrom?, validTo?, updatedAt
categories/{id}	key, label{en,hi}, ctaLabel{en,hi}, icon, gradientStart, gradientEnd, description{en,hi}, subcategories[{key, label{en,hi}, displayOrder, active}]?, displayOrder, active, showWhenEmpty
appConfig/main	minSupportedVersion, maintenanceMessage?, legal{about, disclosure, disclaimer, privacy, terms}{en,hi}, contact{email, whatsapp?, website?}, configVersion
clicks/{autoid}	offerId, partnerId, category, ts(server), appVersion — write-only from app, no user identifiers
stats/daily_{yyyymmdd}	total, byPartner{id:n}, byCategory{key:n}, byOffer{id:n} — written only by Cloud Function
conversions/{id}	partnerId, offerId?, period, count, amount? — entered/imported by admin from affiliate network reports

4.3 Seed partner config (placeholders — replace only with approved links)

```
[
  {"id": "zet", "name": "ZET", "categories": ["personal_loan", "credit_card", "bank_account"],
   "applyUrl": "[APPROVED_ZET_AFFILIATE_LINK]", "active": true},
  {"id": "qcred", "name": "QCred", "categories": ["home_loan", "business_loan"],
   "applyUrl": "[APPROVED_QCRED_PARTNER_LINK]", "active": true},
  {"id": "creditcares", "name": "CreditCares", "categories": ["business_loan"],
   "applyUrl": "[APPROVED_CREDITCARES_PARTNER_LINK]", "active": true},
  {"id": "upstox", "name": "Upstox", "categories": ["demat"],
   "applyUrl": "[APPROVED_UPSTOX_PARTNER_LINK]", "active": true},
  {"id": "policybazaar", "name": "Policybazaar", "categories": ["insurance"],
   "applyUrl": "[APPROVED_POLICYBAZAAR_PARTNER_LINK]", "active": true}
]
```

An offer whose URL is still a [PLACEHOLDER] or fails validation is treated as **inactive** and never shown.

4.4 Offer repository logic

- **Load order:** Hive cache → emit immediately → fetch Firestore (active offers, partners, categories, appConfig) with 8 s timeout → validate → save cache → emit if changed. If remote fails and cache empty → bundled offers_fallback.json.
- **Visibility rule:** show an offer only if offer.active && partner.active && category.active && now within validFrom/validTo && URL valid. Deactivating anything in admin hides it on next refresh — no APK update.
- **Validation:** reject records with missing required fields, unknown category, non-https URL, host not in partner.allowedDomains, text over length limits (title 60, description 300, chip 40). Invalid records are skipped, never crash the app.
- **Sanitising:** all remote text treated as plain text (strip HTML/control chars); legal Markdown rendered with links restricted to https and no images from unknown hosts.
- **Force update:** if app version < minSupportedVersion, show non-dismissable update screen linking to Play Store.
- **Performance budget:** release APK per ABI ≤ 12 MB (use --split-per-abi, R8/shrinkResources, tree-shaken icons, subset fonts); cold start ≤ 1.5 s on a ₹10k-class phone; 60 fps scrolling; Firestore reads per app open ≤ 1 query per collection (cache with 30-min freshness).

5.1 Admin panel (web, Firebase Hosting)

- **Login:** Firebase Auth email/password + mandatory 2FA (TOTP) for owner. Access only if the user has custom claim `admin: true` (set once via a script in `functions/scripts/setAdmin.ts`). No public sign-up.
- **Dashboard:** KPI tiles — total clicks (today / 7 days / 30 days), active offers, inactive offers, active partners, conversions (from imported data). Charts: daily clicks line (30 days), clicks by category bar, clicks by partner bar, top 10 offers table. Date range picker (daily / weekly / monthly).
- **Offers:** table with search/filter by category, partner, status. Actions: Add, Edit, Duplicate, Delete (with confirm), Activate/Deactivate toggle, drag-and-drop display order, change category, change URL. Form has EN + HI tabs, live preview of the OfferCard in light and dark, and inline validation (https, domain allowed, length limits, banned-phrase check).
- **Partners:** Add/Edit/Delete, logo upload (Firebase Storage, auto-resize to 256px WebP), allowedDomains, verified flag, regulatory info, activate/deactivate (cascades hiding of all its offers).
- **Categories:** reorder, rename (EN/HI), change CTA text, gradient colours, icon, active flag.
- **App config & legal:** edit legal Markdown (EN/HI) with “Last updated” auto-stamp, contact details, minSupportedVersion, maintenance message.
- **Conversions:** manual entry or CSV import of affiliate-network reports (partner, period, count, optional amount). Shown only in admin — **never** in the user app.
- **Audit log:** every admin write stores who/what/when in `auditLog`. “Publish” bumps `appConfig.configVersion` so apps refresh.
- **Banned-phrase guard:** admin cannot save text containing: guaranteed, 100% approval, instant approval, no documents, lowest rate (case-insensitive, EN + HI equivalents). Show the reason.

5.2 Analytics pipeline (anonymous, consent-based)

Also count `invalid_url` and `apply_cancelled` events the same way so the owner sees broken links quickly. Do not use Google Analytics advertising features or advertising ID.

5.3 Firestore security rules (must implement and unit-test with emulator)

```

offers, partners, categories, appConfig : allow read: if true;   allow write: if isAdmin();
clicks  : allow create: if request.resource.data.keys().hasOnly(['offerId','partnerId','category','ts','appVersion'
]);
                                && request.resource.data.ts == request.time && validSizes();
                                allow read, update, delete: if false;           // app can never read clicks
stats, conversions, auditLog : allow read, write: if isAdmin(); // stats written by Functions (admin SDK)
isAdmin() = request.auth != null && request.auth.token.admin == true
  
```

Enable **Firebase App Check** (Play Integrity) for Firestore and Functions so only the genuine app can write clicks. Add per-offer rate limiting in the Function (ignore > 20 clicks/min from the same App Check token).

5.4 Security checklist

Rule	Implementation
HTTPS only	Reject any <code>http://</code> URL in app and admin; Android <code>network_security_config</code> : <code>cleartextTrafficPermitted=false</code>
No sensitive data	No forms for PAN/Aadhaar/bank/OTP/UPI PIN/passwords; no such fields in any model; lint rule/test that fails build if a <code>TextField</code> with these hints appears
No remote code	No <code>WebView</code> , no <code>eval</code> , no dynamic JS, no remotely loaded Dart/plugins; remote config is data only
Minimal permissions	AndroidManifest: <code>INTERNET</code> + <code>ACCESS_NETWORK_STATE</code> only. Test asserts manifest contains nothing else
Link safety	Domain allowlist per partner; show destination domain in leave-app sheet
Secrets	No service-account keys in app or admin bundle; Firebase config only; admin claims set server-side
Release hardening	R8 obfuscation, disable debug logs in release, signed with Play App Signing

6.1 Compliance & honesty rules (apply everywhere)

- Describe the app everywhere as “a financial-offer discovery and referral platform”. Never as a lender, bank, NBFC, insurer, broker or investment company.
- Show the short disclaimer on Home footer, Category screen, Offer Details, and in the leave-app sheet; full text on Disclaimer screen.
- Insurance & investment:** only link to the partner's official quote/purchase page. Never show our own premium quotes, plan comparisons, returns or “best plan” rankings; any plan facts must come from the partner. Show the partner's IRDAI/SEBI registration text only if the partner supplies it.
- Show partner regulatory details only as supplied by the partner; never claim RBI/SEBI/IRDAI registration on the owner's behalf.
- Only use URLs supplied/approved by the respective affiliate or partner program. Keep a copy of each partner agreement/approval outside the app.
- Owner must verify current Google Play Financial Services policy and applicable Indian rules (RBI digital lending guidelines, IRDAI/SEBI rules for insurance/investment referrals, DPDP Act 2023) before publishing, and get professional advice if unsure. Claude Code must flag, not decide, legal questions.

6.2 Play Store readiness (Claude Code prepares drafts in /store)

Item	What to prepare
Listing	App name FinChowk . Play title (max 30 chars): “FinChowk: Loan & Card Offers”. Tagline / short description: “FinChowk: Loan, Card & Insurance Offers”. Full description, short + full description stating clearly that the app is a referral platform, not a lender. No banned phrases, no rate/amount claims
Financial features declaration	Answer accurately: app does not provide loans itself; it links to third-party providers. Owner reviews final answers
Data safety form	Draft: collects anonymous app interactions (optional) and crash logs (optional); no personal, financial, location, contacts or messages; data encrypted in transit; user can reset
Privacy policy URL	Public page on Firebase Hosting, same text as in-app
Screenshots	6 phone screenshots from the real build (Home, Category, Offer Details, Leave-app sheet, Disclosure, Dark mode). No fake numbers
Content rating & target audience	18+ audience, finance category, no ads SDK
Release	AAB, Play App Signing, internal testing track first, then closed testing

6.3 Build order — stop after each phase for owner review

Phase	Deliverable	Done when...
0 · Setup	Flutter + Firebase projects, flavors (dev/prod), CI (analyze + test), Figma MCP connected	App runs on emulator; flutter analyze clean
1 · Design system	tokens.dart from Figma, light/dark themes, fonts, all components in a widget gallery screen (dev only)	Gallery matches Figma side-by-side; golden tests for each component
2 · Data layer	Models, Firestore/cache/fallback sources, repository, validation, sanitiser, URL guard	Unit tests: invalid URL hidden, inactive hidden, placeholder hidden, offline → cache → fallback
3 · User screens	Onboarding, Home, Category, Details, Search, Apply flow, legal, Settings, EN/Hi	Integration test taps through Home → Apply opens external URL; all strings localised
4 · Analytics	Consent, click queue, Cloud Function aggregation, retention job	Emulator test: 10 clicks → stats doc shows 10; consent off → 0 writes
5 · Admin panel	Auth + 2FA, Dashboard, Offers, Partners, Categories, Config, Conversions, Audit log	Deactivate an offer in admin → disappears from app on refresh without new APK
6 · Hardening	Security rules + tests, App Check, R8, manifest check, performance pass	APK ≤ 12 MB/ABI, cold start ≤ 1.5 s, rules tests pass
7 · Store	Store listing drafts, data-safety draft, screenshots, public legal pages, AAB	Owner checklist below all ticked

6.4 Final acceptance checklist

- UI matches Figma in light and dark at 360dp and 320dp; Hindi text fits without clipping.
- Zero hard-coded affiliate URLs in lib/ (grep test in CI fails the build if “http” appears outside config/fallback).
- Every visible financial fact traces to a partner-supplied config field; empty fields are hidden.
- Changing a URL, title, logo, order, category or active flag in admin updates the app with no new APK.
- Only INTERNET + ACCESS_NETWORK_STATE permissions; no sensitive-data inputs anywhere.
- Disclaimer + affiliate disclosure visible in the required places; banned phrases absent (automated check).
- README explains: how to add a partner, change a link, publish legal text, deploy admin/functions, build a release.

How to use this prompt: 1) Put your Figma link in place of **[PASTE_FIGMA_FILE_LINK]**. 2) Replace partner placeholders only with approved links (or leave them — the app hides placeholder offers). 3) Paste this whole document into Claude Code and say: “Start with Phase 0. After each phase, show me what you built and wait for my OK.”
